- 1 Universal Ball
- 2 Angle Adjustment
- 3 Suction Cup Locking
- 4 Suction Cups

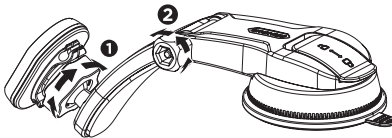

Operating steps

Bedienschritte | Étapes de fonctionnement | Fasi operative
Pasos operativos | ليوغرتل تاوع | 操作手順 | 操作步驟

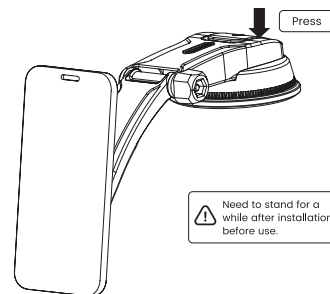

1. Connect the sucker accessories to this product, put the universal joint ball into the nut first, and then insert it into the bolt on the back of the product.

2. Tighten the nuts clockwise; Rotate the knob counterclockwise to adjust the high and low angle, and tighten it clockwise to fix the angle.

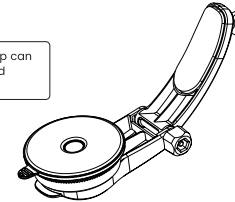

3. Press the suction cup firmly to secure it in the appropriate position, then press the exhaust button.

4. If you need to replace the position of the holder, you can remove the holder, and clean the impurities at the bottom of the suction cup with water to maintain stronger suction.

The suction cup can be washed and reused.

5. Before using the magnetic phone holder, you need to stick a magnetic plate on the back of your phone.

When you purchase a (D48/D49/D50/D52/D53) series bracket, you do not need to stick a magnetic sheet when using a mobile phone that supports the built-in magnetic suction function. You can directly fix the mobile phone firmly on the bracket. For mobile phones without magnetic suction function, you need to fix the metal ring.
